SUMMARY

Motivated Computer Science and Information Technology (CSIT) graduate with a strong interest in backend development and data analysis. Proficient in Python, FastAPI, and JavaScript, with hands-on experience building and understanding server-side systems. Currently working as a Data Analyst, applying analytical skills to derive insights from data. Committed to continuous learning and eager to further develop technical expertise while contributing to backend and data-driven solutions.

EDUCATION

Swastik College, Tribhuvan University

Bachelors in BSC.CSIT

Percentage : **71% approx**

Bhaktapur, Nepal

sept 2020 - sept 2024

Golden Gate International College

+2 National Examination Board

CGPA : **3.09/4**

Kathmandu, Nepal

jun 2017 - july 2019

EXPERIENCE

Asseti Automated Asset Management

Kathmandu, Nepal

Data Analyst

November 2025 – Present

- Performed high-quality data annotation for asset management datasets supporting AI/ML.
- Annotated and validated 3D models by labeling and classifying asset components.
- Conducted QA checks to ensure annotation accuracy and consistency.
- Collaborated with cross-functional teams to improve annotation guidelines.
- Processed and analyzed asset data using AssetOS.
- Prepared structured datasets for AI training and predictive asset management.
- Automated data cleaning and preprocessing to improve data quality.
- Managed large datasets while maintaining accuracy and meeting deadlines

Alphateds Tech Pvt. Ltd

Kathmandu, Nepal

Associate Python Developer

August 2024 – May 2025

- Designed and implemented backend components using Python, including RESTful APIs and optimized database interactions for scalable application performance.
- Conducted unit and integration testing, debugging, and collaborated with cross-functional teams to ensure seamless software integration and delivery.
- Demonstrated adaptability and collaboration while continuously improving technical skills in a production environment.

Pro-mech Minds Engineering Services

Lalitpur, Nepal

Software Engineer Intern

March 2024 – June 2024

- Automated web scraping of mechanical product data using Python and SeleniumBase for efficient data collection.
- Cleaned and preprocessed large datasets using Pandas and NumPy, standardizing product specifications.
- Performed exploratory data analysis (EDA) using Matplotlib and Seaborn to identify trends and insights.

SKILLS

Programming Languages: C++, Python, Javascript
Libraries/Frameworks: React, FastAPI, Pandas, Matplotlib
Tools / Platforms: Git, Github
Databases: PostgreSQL

PROJECTS DONE

Sentiment Analysis | [Link](#)

React, FastAPI, Pytorch

- With this project, I was aiming to perform the sentiment analysis of the Nepali Language and with the final launch user can enter sentences and the model will return the sentiment of that sentence

Building calculator | [Link](#)

javascript,html, css

- With this project, I aimed to create a user-friendly calculator using HTML, CSS, and JavaScript. My goal was to design a clean and responsive interface with color-coded buttons for numbers, operators, and special functions like "AC" and "Del." The JavaScript logic ensures smooth operation, making it an intuitive and practical tool for basic arithmetic tasks.

Quiz Brain | [Link](#)

python, API

- With this project, I aimed to build a GUI-based quiz application using Tkinter while applying object-oriented programming (OOP) principles. It processes quiz data from an API, organizes it into a structured question bank, and presents the questions through an interactive interface. Users can attempt the quiz through the GUI, and their final score is displayed upon completion.

ISS Overhead Alert System | [Link](#)

python, API, smtplib

- With this project, I aimed to build a system that tracks the position of the ISS and sends email alerts when it passes overhead during nighttime. The system utilizes APIs to fetch real-time ISS location and sunrise-sunset data, incorporates datetime for time-based calculations, and uses smtplib for automated email notifications, continuously monitoring conditions at regular intervals.

Flash Card Project | [Link](#)

python, API, pandas

- With this project, I aimed to build a flashcard application to help users learn a new language. Using Tkinter for the graphical interface, the app displays French words on the front and English translations on the back, flipping the cards after a set time interval. It uses a CSV file to manage the word dataset and updates the list by removing known words as the user progresses. This project combines interactive UI design, file handling, and randomization to create an engaging learning experience.

WORKSHOP AND SEMINARS

- Office packages
- Graphic Design
- Photoshop
- Resume writing
- Python
- Block chain with python(E-wallet)
- Web development

CERTIFICATIONS

- Block chain with python(E-wallet)
- Python Programming ([Link](#))
